solerbath.

The art of flow

Jordi Soler Fornt, CEO

Our father, Ramón Soler Roger, taught my siblings and I to think of design as a tool with which to make real products that generate sensory experiences and improve the quality of life of people.

For that reason, **solerbath** has an industrial, but also a human soul. Know-how that is focused on integrating sustainability, innovation and high technology in both process engineering and in the finished product.

As the result of the illusion and dedication of many years, we have shown our enterprise and firm contribution to society through innovation that solves real problems. From the Gold Medal of the Barcelona Universal Exhibition in 1929 until the German Design Awards, Red Dot, and IF Design, 7 awards in the last 4 years. "According to Leonardo Da Vinci, beauty lies in symmetry and perfect proportions, such as those found in nature. True to the same purpose as Da Vinci, we have managed to find perfect aesthetic harmony in our products."

TOILETS & BIDETS

AQUITANIA

It is for those who are looking for harmonious designs, a combination of volumes in rounded shapes ideal for combining with the rest of the bathroom elements. Aquitania represents the perfect fusion of modern design and exceptional functionality. It encompasses toilets and bidets that not only meet the essential needs of the bathroom, but also add a contemporary aesthetic touch.

With its clean, streamlined lines, AQUITANIA blends harmoniously into any type of bathroom. This collection is available in three basic types of toilet: complete WC, wall-hung toilet and back-to-wall toilet. All of them stand out for their compact, rimless design and their cushioned lid with clip off. In addition, the floor-standing toilet has a dual outlet. All of them created with quality materials and innovative functional systems for a better user experience.

ALMA

The most avant-garde bathrooms are dressed up with ALMA, a collection of refined geometry, which gives rise to balanced lines that transform bathrooms into elegant and harmonious spaces. This Solerbath collection is the perfect choice for those who wish to turn their bathroom into an oasis of well-being and comfort, where the art of design meets functionality and avant-garde.

This exclusive collection offers a variety of options to suit all needs and preferences, with three exceptional compact toilets: complete WC, wall-hung toilet and back-to-wall toilet. All of them feature a cushioned lid with clip off system, providing the convenience of smooth and safe opening and closing. In addition, we highlight the presence of the dual flush mechanism in the products of the ALMA collection. This feature ensures efficient water use without sacrificing functionality.

A L M A

A L M A

In today's world, hygiene and health concerns are of paramount importance. In this context, ALMA toilets stand out because they are made of antibacterial ceramic. This attribute not only guarantees superior durability and resistance, but also acts as a barrier against the proliferation of germs and bacteria, thus creating a healthier and safer environment for all members of the family.

DORIA

DORIA embodies excellence in functional design and comfort for the contemporary user. Designed with a clear focus on providing an optimal bathroom experience, this series offers modern toilets and bidets that fuse elegant styling with innovative functionalities. They are designed to be easily accessible and intuitive to use, catering to the needs of the most demanding users.

Doria's refined style manifests itself in smooth lines and harmonious shapes that add a touch of sophistication to any bathroom space. Moreover, its innovative approach to functionality not only meets aesthetic expectations, but also offers everyday comfort, thanks to efficient flushing systems, anti-splash technology and ergonomic seats that take the functionality of these elements to a new level.

WASHBASINS

K E N D R A

It unfolds all its natural elegance in bathroom spaces, with a sinuous design of refined lines and organic shapes. The Kendra washbasins are made up of a single piece with curved lines. This series offers four types of washbasins: one of them is circular, the other is oval and the other two washbasins have a combination of curved and straight lines, and include a hole to install the tap.

In line with the virtues that characterise Solerbath products, the washbasins of the KENDRA collection work perfectly in interior design projects, thanks to their modern and contemporary design and technical specifications. Durability, ease of cleaning and maintenance, as well as versatility in design and aesthetics, are indispensable features for contract and hotel projects.

K A I S E R

With different washbasin models over countertop, KAISER is characterised by its elegant aesthetics, adaptable to any style. Its dimensions and characteristics are ideal for combining with the most up-to-date washbasin furniture and the latest trends in bathroom spaces, from the most minimalist to the most baroque.

The KAISER washbasin collection presents a design of straight lines, perfectly joined by rounded corners. A single piece, which presents smoothness and continuity in its forms. Every curve and angle have been meticulously conceived to create a sense of unity in the design. The soft, rounded edges not only add elegance, but also contribute to the safety and comfort of the user.

K A I S E R

In addition to their exquisite design, the washbasins in the KAISER collection also incorporate advanced functionalities that are in line with contemporary expectations. Ergonomics have been taken into account to ensure comfort in every use, and the selection of high-quality materials guarantees durability and resistance over time. It also has two installation modes for washbasins with tap housing. The washbasin can be mounted on a countertop or wall-hung.

INNOVTECH

INNOVATION & TECHNOLOGY

BREEAMers

Our sanitary care products are designed to meet BREEAM and LEED environmental building certifications.

With a focus on efficient water management, these products bring sustainable value to today's buildings.

In particular, our toilets integrate advanced technology that allows us to regulate the flushing mechanisms to suit the water savings required, offering different litre options to suit the level of demand required by the project.

As standard, all our mechanisms are set at 3/4.5 litres, which is sufficient flow to provide adequate comfort, and at the same time comply with Breeam's level 4 out of 5, as well as LEED requirements.

However, if BREEAM Excellence level is required, our discharge can be adjusted to 2.5/4 litres. This innovation represents our strong commitment to sustainability and water efficiency in the design of our products.

RIMLESS SYSTEM

The system that facilitates bowl cleaning and maximizes hygiene. Toilets with hygienic flushing system. Its rimless, purified and uniform design facilitates cleaning and prevents the proliferation of bacteria. Thanks to the elimination of shapes and angles inside the bowl, the water circulates homogeneously, allowing cleaning and disinfection over the entire surface of the inside of the toilet, in a complete and controlled manner, without splashing.

ANTIBACTERIAL CERAMIC

Ceramic is the hygienic material par excellence, thanks to its durable surface glaze that prevents water absorption and the proliferation of moisture and bacteria. Its precise formula based on minerals such as clay, kaolin, feldspar and quartz results in an incredible consistency that confirms its durability over time. In addition, the exclusive ceramic finishing ensures resistance to abrasive cleaning products, high temperatures and ultraviolet light, maintaining its original shine and offering high performance at all times.

3/4,5 L DISCHARGE MECHANISM

The toilets offer advanced technology that incorporates a water-saving device configured to choose between 3 litres of small flush, or 4.5 litres of large flush. Similarly, the user can regulate these flush mechanisms to suit the water savings required, offering different litre options. This innovative feature represents a commitment to sustainability and water efficiency in toilet design. The dual flush device provides the flexibility to choose the amount of water used according to need, allowing for a more responsible use of this vital resource.

BREEAM/LEED

Our sanitary products comply with BREEAM and LEED certifications. With a focus on water savings, the toilets feature advanced technology to adjust flush litres according to the user or project. They are set as standard at 3/4.5 litres, which meets BREEAM and LEED level 4 out of 5. However, the flush can also be adjusted to 2.5/4 litres to achieve BREEAM Excellence level. This is our commitment to sustainability and water efficiency.

CLIP OFF SYSTEM

Convenient cleaning and hygiene thanks to the Clip Off system, which makes it possible to remove the toilet seat and lid easily, without the need for tools. The Clip Off system allows complete cleaning and disinfection of both elements of the toilet. With the incorporation of stainless steel hinges, the system provides a reliable mechanism for hassle-free assembly and disassembly. The stainless steel hinges give the toilet a longer service life, minimising wear and tear and ensuring a longer lasting, quality user experience.

CONFORT SEAT

The seat distinguishes itself by providing a wide and extremely comfortable support surface. This specific design focuses on maximizing user comfort by offering a wide surface that ergonomically adapts to body morphology. It ensures resistance and ease of cleaning, meeting the hygiene and functionality standards required for an optimal daily toilet experience.

CLOSING SYSTEM/SOFTCLOSE

The cushioned closing system ensures that the toilet lid falls and closes smoothly and quietly. Its design incorporates maximum resistance hinges with cushioning, for a controlled closing, avoiding annoying knocks, breakages and accidents.

HIDDEN FIXING SYSTEMS

The fixing system for toilets and bidets is an innovative solution that combines functionality, stability and aesthetics in bathroom design. This mounting technology allows toilets and bidets to be installed discreetly and securely, without visible screws or elements that interrupt the external surface. It not only improves the visual presentation of the bathroom, but also responds to the search for a clean, practical and elegant design in the home.

DUAL OUTPUT INSTALLATION

Easy and optimal installation. Universal outlet for dual connection (horizontal and vertical). Elbow included. Dual installation of the toilet is possible, for flushing in both modes: Horizontal, with straight inner siphon for water dispersal towards the wall. Vertical, with inner siphon in the form of an elbow, for the dispersion of water towards the floor.

BILATERAL INLET CISTERN

Easy and optimal installation. Cistern with bilateral bottom inlet. The water inlet is from the bottom of the toilet and can be installed on the right or on the left, depending on the needs of each installation.

DUAL INSTALLATION WASHBASIN: OVER COUNTERTOP OR WALL-HUNG

Washbasins that adapt to all needs, thanks to their dual installation. Two installation modes for washbasins with mixer hole. The assembly of the washbasin is possible on countertop or wall-hung installation.

SPARE PARTS

Spare parts are the critical parts that ensure the durability, optimum performance and continued functionality of sanitary systems. Specifically designed to fit perfectly with the brand's products, these parts offer a reliable solution to maintain efficiency and continuity in the performance of toilets and bidets. The ramonsoler range of spare parts ranges from key parts, such as flush valves, to more specific components, such as internal mechanisms. All of them ensure the necessary spare part for any repair or periodic maintenance.
